

I have a question about...

INHERITANCE

2019

I'd really like to make a project, but just can't get an idea -_-''

Congratulations, you're **normal!**

Ideation is usually the part that takes the **most time**. An idea can be anything that YOU want to make a reality.

Is there something that you want to change? Is there something you want done better? Something not presently there but would be great if available? Something that originates in your experiences?

We encourage a personal approach, but if you feel too lost, search for inspiration (read: Google) (*inspiration*).

Okay, well I do have an idea, but I don't know shit :/

No one is born with a keyboard in their hands. Don't worry. All of us start like this.

The aim is to let you explore what you don't know, and let you explore something better if you already do know (about) it. Technical and logistical details, don't break your head over those right now. Believe in yourself, believe that you will learn. If you're stuck, seniors will be there to guide you.

What if I can't learn?

Aisa kuchh nahin hota.

Does my branch matter?

Bilkul nahin. Your interest and dedication does.

How do mentors choose teams?

After the interviews - which happen after your exams (and ours), the selected teams are assigned mentor(s) depending on:

- Areas that the mentors (may) have (more) knowledge of/experience in;
- Their interest in the teams's approach and/or project idea.

Who all can register? Any and every interested First Year willing to learn.
Still confused? *Don't hesitate.*
